

The CADM Rotary Collator will do the same for YOU

MEETING COMPETITION

Publisher: "We now use FIVE girls collating for 8 hours where we formerly used NINE girls 12 hours."

• • • • •

Private Printer: "We paid for the Cadm Rotary Collator on our first job. This job repeats each year and we know our previous costs."

• • • • •

Bindery Girl: "The answer to a bindery girl's prayer."

• • • • •

Bindery Foreman: "We bought this machine to collate a 9 x 12 side stitch magazine, and now we use it for all kinds of jobs from 4 x 6 up."

Lady Operator: "You can take anything else out of our department but don't take out collator."

• • • • •

Commercial Printer: "Without previous experience, our first job with time study showed a saving of 46% in collating as compared to other methods."

• • • • •

Insurance Company: "ONE girl does all of our collating with our Cadm Rotary Collator. Previously, we kept THREE or FOUR girls busy all the time."

• • • • •

These remarks are on file. Capitalize on these **COST-CUTTING** facts by getting your order in now.

Special Equipment

Jumbo Tray Head — to take up to 9 x 12 folded signatures for extra depth.

Extra large Tray Head — to take up to 12 x 19.

Plain Head — to take extra supplies, collated sections or odd sizes.

Polyethelene Dust Cover for equipment or material in process.

Double Deck Head — one above the other, to double the capacity of each machine.

Specifications

Requires 48" x 48" floor space.

One to seven revolutions per minute

Operating Head 30" from floor

Storage Deck 40" from floor

Powered by 110V AC motor

Shipping Weight 200 lbs. prox.

Announcing . . . TIME-SAVING — INVESTMENT-SAVING ACCESSORIES FOR CADM ROTARY COLLATORS

EXPANSO INSERTS

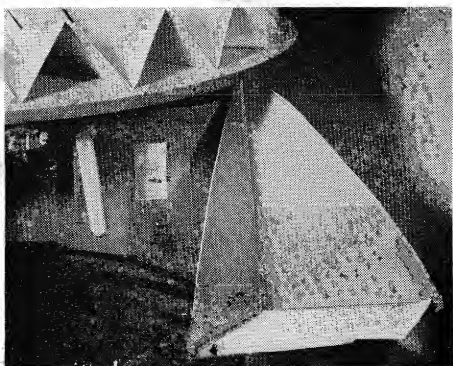

EXPANSO INSERTS are flat fiberboard sheets, supplied in two standard sizes, 11" x 14" and 14" x 28", or any special sizes which are required. These are placed loose in the standard CADM Rotary Collator trays, and expand the tray capacity for particular applications. The photograph illustrates a double-decked CADM Rotary Collator with the standard trays on the bottom deck, and the EXPANSO INSERTS in position in the same trays on the top deck. Note the increased capacity where EXPANSO INSERTS are used.

DOUBLE DECK MACHINE

An extra table and trays with legs for DOUBLE - DECKING, allows the addition of twenty more stations, doubling the capacity of a standard CADM Rotary Collator.

The operator gathers from first one deck, and then the other. The attachment fits easily onto either the standard or heavy duty CADM Rotary Collator. The heavy duty machine has the capacity to carry three of four of these standard four foot decks, if desired, to provide eighty, or more stations on one collating machine. On the heavy duty model, over eight foot tables may be similarly decked to provide 240 or more stations!

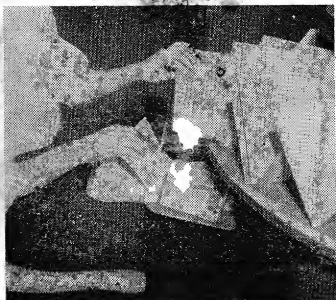

STAK-RAK

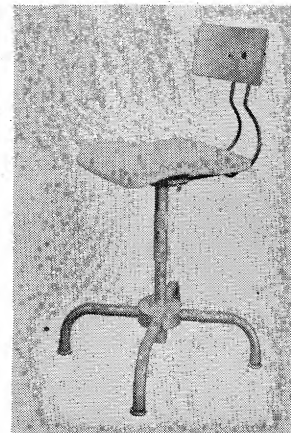

The STAK-RAK is a three-sided magazine which hooks onto any of the three legs of the CADM Rotary Collator. It is free to swing into any position for the convenience of the operator. For easy removal, the sets of collated material are criss-crossed in the STAK-RAK as illustrated. The full magazine, having been replaced by an empty STAK-RAK, can be easily stored for future operations. The STAK-RAK will hold most any size sheets to a depth of 14".

LAP-RAK

The LAP-RAK enables the operator to better than double conventional gathering time on a standard CADM Collator. It is placed in the lap to hold the collated material, freeing both hands for gathering. The first set is gathered at one angle, and the second set at another as illustrated, making the gathering a continuous operation. This eliminates both delays between sets and the need for separators. When full, the LAP-RAK can be replaced with an empty LAP-RAK and, if desired, can be set on a flat table or shelf for storage awaiting future operations. The positioning of the sheet locating pegs on the base of the LAP-RAK is such as to accommodate virtually any sheet size. The locating pegs also serve to align the sheet uniformly, eliminating to a great extent, a subsequent jogging operation.

These various items will prove helpful in increasing the productivity, the flexibility and the value of your new CADM Rotary Collator.

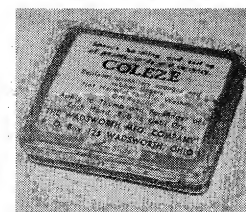

OPERATOR'S CHAIR

The OPERATOR'S CHAIRS, recommended for use with the CADM Rotary Collators, feature a curved, comfortable back rest. The height of both the back rest and the chair can be adjusted independently to suit the comfort and convenience of the operator.

COLEZE is recommended to speed gathering on the CADM Rotary Collator. It is offered in a convenient plastic container. A small amount of the material rubbed onto the thumb and forefinger of each hand facilitates picking up individual sheets of paper.

COLEZE is not harmful to the skin and readily washes off.

New!

CADM Rotary Collator

A valuable companion piece for duplicating and printing machines to expedite collating and gathering.

The Cadm Rotary Collator was built to meet the needs of office and printing plants for collating magazines, bulletins, etc. It is more flexible than most more expensive machines.

This is the result of factory tests giving you one, two and three station simultaneous production with full control from any position.

Nationwide Mutual Insurance Co.

Convenient Working Height

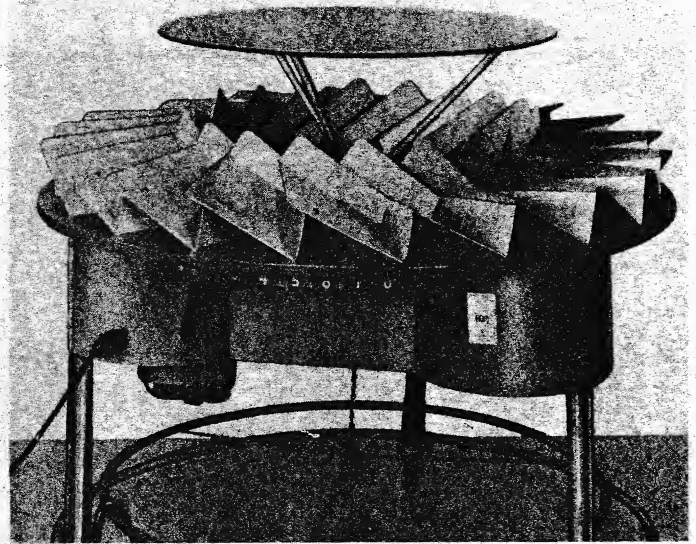

To collate from a sitting position is most restful for the operator, but quite often the person collating must be up and down. The working height of this machine is adapted for easy operation from either position.

Sitting or standing, the operators are in easy reach of each section. Inspection and jogging are easy to do. Extra supplies or collated sections can be placed on storage deck without strain.

Multiple Foot Control

This prize feature is exclusive with the Cadm Rotary Collator. By pressing the toe on the inner pressure switch control ring at any point, the machine will start or stop. The outside rest ring is to maintain the relaxed position of the operators.

The variable speed control can be adjusted, without stopping, to the most convenient speed for best production.

Sturdy Construction

All steel construction and attractive finish equals any office equipment. Self-lubricating bearings and tubular frame enhances its value.

Special laminated materials used in the rotating top to support and adequately secure the steel trays. Three point suspension maintains level and positive rotation.

By mounting on rubber swivel rollers and using similar materials at all moving points, undue wear, noise and vibration is entirely eliminated.

Structural strength has been incorporated many times more than maximum work load. Powered by 10 V. motor.

Positive Speed Control

The positive speed control lever is placed in easy reach of the operator. Speeds are numbered to give best production rating depending on the type of job to be collated. By movement of this squeeze type lever, impulse is generated on the drive mechanism to instantaneously alter the speed of the collator.

As the operators improve in efficiency the speed control lever can be advanced. Time study of similar jobs will indicate which operating speed is most efficient and the work order will be marked accordingly. This increased controlled speed of collating will show increased efficiency and profit for that department.

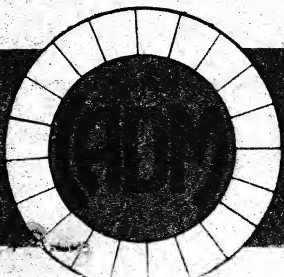

Increase Production

Designed for cost-cutting production, 40 page bulletins or 20 folded signatures complete in one operation to 9x12 inches. Odd sizes and count can be worked conveniently.

Special sizes up to 12 x 19 inches, multiple combinations or special units can be ordered. Group packaging for unit assembly of nuts and bolts for appliances are cutting costs.

Many producers of side stitched magazines are now proud owners. Extra help for peak periods is eliminated. Increased PROFITS often pay for the Cadm Rotary Collator in one application.
